

Supplementary Figure 1

Supplementary Figure 1

Supplementary Figure 1.

Expression of genes differentially expressed in ACHN and RCC1 cells. Genes identified as significantly differentially expressed in ACHN and RCC1 cells using Welch *t*-test with a *p* value cutoff of 0.05 and a Benjamini and Hochberg false discovery rate multiple testing correction are graphed to illustrate differences in expression between the cell lines. Standard error bars plotted represent three biologic replicates. The names of the genes are listed in Table 3 of Holko and Williams (2006) *J Interferon Cytokine Res* 26 (8).
